Claude Documentation

Writing the repository's documentation and reports

Technical documentation · British English
November 2026

1. Introduction

Claude is the artificial intelligence assistant developed by Anthropic. In this repository its role is **writing documentation and reports**. This documentation describes the tool, what has been produced so far, the workflow and the standards adopted.

The text describes the function assigned to Claude in the project. Anthropic's features and products change frequently; consult the official material for current details.

Tools in the repository

Tool	Role in this repository
Mullvad VPN	Network layer: privacy and security of the connection when exploring the Surface Web and, as a complement, the dark web
ChatGPT	Organisation of the repository: folder structure, naming and categorisation
Gemini	Choice of the websites that make up the repository
Claude	Writing documentation and reports

2. What Claude Is

Claude is a conversational assistant that can be used in web, mobile and desktop apps, through an API and in developer-oriented tools such as Claude Code. Its applications include:

- drafting, proofreading, summarising and translating long texts;
- structuring reports, manuals and technical documentation;
- analysing documents and files supplied by the user;
- writing and explaining code;
- creating files such as PDFs, spreadsheets and presentations, where file tools are available;
- searching the web to check recent information, where search is enabled.

3. Role in the Repository: Documentation and Reports

Claude writes the project's reading material: reports on the Surface Web and documentation for the tools that support the work. It also handles translation between Portuguese and British English and the production of PDFs in A4 format.

What has been produced so far

Document	Languages	Format
Report on the Surface Web	Portuguese and British English	Online document and A4 PDF
Google Chrome documentation (Surface Web)	Portuguese and British English	A4 PDF
Tor Browser documentation (dark web)	Portuguese and British English	A4 PDF
Mullvad VPN documentation	Portuguese and British English	A4 PDF
ChatGPT documentation	Portuguese and British English	A4 PDF
Gemini documentation	Portuguese and British English	A4 PDF
Claude documentation	Portuguese and British English	A4 PDF

4. Workflow

1. **Brief**: the user defines the subject, audience, language and format (for example, an A4 PDF).
2. **Research**: for information that changes, such as versions, prices and features, Claude consults current web sources before writing.
3. **Writing**: drafting the text with a clear structure, in numbered sections, lists, tables and highlighted notes.
4. **Translation**: a British English version, with UK spelling and vocabulary rather than a simple word swap.
5. **Layout**: generating the A4 PDF with a cover, footer and page numbers.
6. **Checking**: confirming the page count, paper size and the appearance of the pages.
7. **Delivery and review**: the user reads, asks for changes and Claude updates the material.

5. Standards Adopted in the Documents

- A4 format (210 × 297 mm), with comfortable margins.
- A cover, numbered headings and a footer with the document name and page number.
- One accent colour per series: blue for Chrome, purple for Tor Browser, teal for Mullvad VPN, and so on.
- Sites cited by name only, without the folder identifier.
- Notes in highlighted boxes and tables for comparisons.
- Pairs of documents identical in content, in Portuguese and British English.

6. Strengths and Limitations

Strengths

- Produces long, structured documents quickly and consistently.
- Keeps the same standard across several documents and languages.

- Adapts the level of detail to the audience.
- Can search the web and generate files ready for use.

Limitations

- Its internal knowledge has a cut-off date; recent information should be checked.
- Like any AI model, Claude can make mistakes; important facts need to be verified.
- Product versions, prices and menus change and may differ from the text.
- The result depends on the clarity of the request.

7. Good Practice When Requesting Documents

- State the audience, the purpose and the level of detail wanted.
- Indicate the language, the variety (for example, British English) and the format.
- Provide the list of items or the source material.
- Ask for specific passages to be revised rather than redoing everything.
- Check sensitive data, dates and figures before publishing.
- Do not include confidential information in the request unless necessary.

8. Conclusion

In WebAtlas, Claude turns the decisions of the other tools into readable, standardised material. ChatGPT's organisation, Gemini's selection and Mullvad VPN's network layer also come to exist as clear reports and documentation, in two languages, ready for reference and printing.
