Dark Web Report

How it was done, risk levels and classification
of 29 sites in 6 categories

Consolidated report · British English
WebAtlas · 2 November 2026

Important notice

Red-level sites must not be accessed. No red-level site was accessed for this report. No .onion address is recorded in this document or in the repository. This material is informative and does not recommend access to any site.

1. What is the Dark Web

The Dark Web is the part of the internet accessible only through specific software such as the Tor Browser, using addresses ending in .onion. It is not the same as the Deep Web. The Deep Web includes everything not indexed by ordinary search engines (email, online banking, login areas). The Dark Web is an intentionally hidden subset based on anonymity networks.

Tor (The Onion Router) works by creating circuits of relays that make it difficult to trace the origin of traffic. This enables both legitimate uses (journalism, activism, privacy) and illegal activities. Using Tor itself is legal in most countries, but the content accessed and the actions taken remain subject to local law.

2. How the work was done

1. Definition of the repository folder structure (Dark Web / categories / DARK-NNN-name).
2. Selection of the 29 sites in 6 categories, continuing from the Surface Web mapping.
3. Risk classification (Green, Yellow, Red or Unknown) based on the criteria in the risk notices.
4. For Red sites: research only from external sources (directories, name, public description). No access. Individual report without address.
5. For Yellow sites: limited access (homepage + HTML source), no clicking links, censorship of sensitive information and cropping of the address from screenshots.
6. For Green sites: access with standard Tor precautions (elevated security level, no personal login).
7. For Unknown: no access. Record only the name and the reason (offline or no concrete information).
8. Preparation of individual reports for the 11 red sites and this consolidated report.
9. Creation of the maps (Dark Web and Complete Surface + Dark).

Main tools: Tor Browser (access), Mullvad VPN (network layer), ChatGPT (folder organisation), Gemini (site selection), Claude (documentation and reports).

3. Risk levels and their rules

Level	Meaning	Conduct
GREEN	Low risk	Access permitted with updated Tor, 'Safest' level, no personal login. Reassess every 30 days.
YELLOW	Moderate risk	Heightened caution: no downloads, no personal data, isolated environment if possible. Reassess e
RED	Extreme risk	DO NOT access. Address never recorded. Individual report based only on external sources.
UNKNOWN	No assessment	No information, no access. Gather data via the Surface Web. Reassess every 30 days.

Note: the Unknown level is not intermediate between Green and Red. It indicates absence of assessment, not absence of danger. In case of doubt, treat as potentially dangerous.

4. Categories and what each one represents

4.1 Illegal Markets · 11 sites · all RED

Platforms for buying and selling illegal products and services: drugs, weapons, fake documents, stolen accounts, criminal services. All 11 sites in this category are Red. None were accessed. Each has an individual report prepared only from external information.

4.2 Digital Libraries · 2 sites · GREEN

Digital collections of books and comics. Classified as Green from a technical standpoint. Note: content may be protected by copyright. Downloading works without authorisation may be illegal under local law.

4.3 Forums & Communities · 6 sites

Discussion spaces with user-generated content. 4 Yellow, 1 Green (PsychonautWiki) and 1 Unknown (OnionForum). Chemistry communities may discuss controlled substances — do not follow or share instructions for illegal activities.

4.4 News & Journalism · 1 site · YELLOW

Coverage of dark web topics. Classified as Yellow because dark web news often contains links to higher-risk sites.

4.5 Bitcoin & Cryptocurrency · 5 sites

Cryptocurrency services: wallets, exchange and mixers. 3 Yellow and 2 Unknown. Highest financial risk among non-illicit categories. Mixing services may be regulated or prohibited in some jurisdictions. Cryptocurrency transactions are irreversible.

4.6 Other Services · 4 sites · GREEN

Miscellaneous services: biblical site, official CIA site on Tor, file-sharing tool and privacy service. Always confirm the .onion address from an official source, especially for institutions such as the CIA.

5. Complete list of the 29 sites with DARK-NNN identifiers

ID	Site	Category	Level
DARK-001	DCdutchconnectionUK	Illegal Markets	RED
DARK-002	DrChronic	Illegal Markets	RED
DARK-003	TomAndJerry	Illegal Markets	RED
DARK-004	420Prime	Illegal Markets	RED
DARK-005	Dark Web Hackers	Illegal Markets	RED
DARK-006	AccMarket	Illegal Markets	RED
DARK-007	DarkMining	Illegal Markets	RED
DARK-008	USFakeID	Illegal Markets	RED
DARK-009	Guns and Ammo Store	Illegal Markets	RED
DARK-010	UKpassports	Illegal Markets	RED
DARK-011	USAcitizenship	Illegal Markets	RED
DARK-012	Imperial Library	Digital Libraries	GREEN
DARK-013	Comic Book Library	Digital Libraries	GREEN
DARK-014	Shadow Wiki	Forums & Communities	YELLOW
DARK-015	Cebulka	Forums & Communities	YELLOW
DARK-016	Breaking Bad	Forums & Communities	YELLOW
DARK-017	Tenebris	Forums & Communities	YELLOW
DARK-018	PsychonautWiki	Forums & Communities	GREEN
DARK-019	OnionForum	Forums & Communities	UNKNOWN
DARK-020	Dark Net News	News & Journalism	YELLOW
DARK-021	Dark Mixer	Bitcoin & Cryptocurrency	YELLOW
DARK-022	EasyCoin	Bitcoin & Cryptocurrency	YELLOW
DARK-023	MixaBit	Bitcoin & Cryptocurrency	YELLOW

ID	Site	Category	Level
DARK-024	OnionWallet	Bitcoin & Cryptocurrency	UNKNOWN
DARK-025	VirginBitcoin	Bitcoin & Cryptocurrency	UNKNOWN
DARK-026	Bible4u	Other Services	GREEN
DARK-027	CIA	Other Services	GREEN
DARK-028	Onion Share	Other Services	GREEN
DARK-029	Cryptostorm	Other Services	GREEN

6. General analysis

Extreme risk is concentrated in a single category: all 11 red sites are in Illegal Markets. Categories with user-generated content (forums and news) are mostly Yellow. Institutional, religious and privacy services are Green. The cryptocurrency category mixes Yellow and Unknown and carries the highest financial risk among non-illicit categories. The 3 Unknown sites (OnionForum, OnionWallet and VirginBitcoin) require more information before reclassification.

7. Recommendations and limitations

Reassess Green and Unknown sites every 30 days and Yellow sites every 15 days. Gather information on OnionForum, OnionWallet and VirginBitcoin via the Surface Web without accessing them. Keep Red sites without access and without address registration. Always confirm .onion addresses of Green sites from official sources before any access.

Limitations: the classification is valid for the date of the report and may change. Sites go offline, change operators and behaviour. Information was provided by the repository owner and has not been independently verified. This document does not list addresses, does not recommend access to sites and does not replace legal advice.

Using Tor is legal in most countries, but each person must know and comply with the law of the place where they are. Illegal activities remain illegal on the Tor network.
