Risk Notice
Yellow Level

Safe, but not 100%: proceed with caution

Risk notice · British English
November 2026

RISK LEVEL

YELLOW

Site considered safe for access, but not 100%. Moderate risks exist: proceed with extra caution and follow the measures below.

▼

GREEN · Low	**YELLOW · Moderate**	RED · Extreme

1. Notice Details

Fill in the fields when issuing the notice for an assessed site.

Field	Entry
Notice code	_____
Site name	_____
Category	_____
.onion address	_____
Date of assessment	____ / ____ / _____
Assessed by	_____
Next review	____ / ____ / _____
Level assigned	YELLOW · Moderate risk

2. Meaning of the Yellow Level

The yellow level indicates that the site **can be accessed**, but **does not offer complete safety**. There is no sign that it is a trap, but there are factors that prevent it from being rated green.

- Access is permitted, subject to additional precautions.
- You should provide no personal information and avoid downloads.
- **Safe, but not 100%**: the decision to access requires constant attention from the user.

3. Criteria for the Yellow Level

One or more of the factors below is enough, provided there is no clear sign of danger:

- **Partly identifiable operator** or an anonymous community.
- **User-generated content**, such as forums, wikis, communities and hosting services, with variable moderation.

- **Address hard to confirm** with an official source, or found only in third-party lists.
- **External links and files** available for download.
- **Registration** required to use some feature.
- **Mixed history**, with isolated reports of problems or instability.

4. Risks

- **Dangerous links** posted by users, including to illegal or disturbing content.
- **Scams and phishing** carried out by other users or through cloned pages.
- **Malware** in shared files.
- **Social engineering**: people trying to obtain information or draw you into private conversations.
- **Identification through behaviour**: personal details, reused usernames and writing style.
- **Instability**: the site may go offline, change hands or change behaviour without warning.
- **Offensive or false content**.
- **Legal risks**, if the user interacts with unlawful content found on the site.

5. How to Protect Yourself

Risk	Prevention
Dangerous links	Do not click unfamiliar links; follow only links that carry a green notice.
Scams and phishing	Never provide passwords, personal data or payments; be suspicious of promises and urgency.
Malware	Do not download or open files; if you must, use an isolated environment such as a virtual machine.
Social engineering	Do not reply to private messages from strangers and do not share personal information.
Identification	Use unique usernames and email addresses that are never reused, and keep Tor Browser unmodified.
Instability	Record the date of each visit and reassess the site frequently.
Unlawful content	Leave immediately, do not interact and do not save anything.

6. Recommended Access Procedure

1. Update Tor Browser and the operating system.
2. Confirm the .onion address with more than one reliable source.
3. Use the **Safest** security level whenever possible; **Safer** at the very least.
4. If possible, access the site from an isolated environment (a virtual machine or a live system).
5. If registration is required, use unique details and an email address with no link to your identity.
6. Do not download files and do not click external links.

7. Use Mullvad VPN as a complementary layer, if you wish, as described in the documentation in this series.
8. When finished, use **New Identity** and close the browser.

7. If Something Goes Wrong

1. Close the tab immediately and use **New Identity**.
2. If you downloaded a file, do not open it; disconnect the device from the network and scan it with antivirus.
3. If you gave a password or personal data, change your passwords from a secure device and turn on two-step verification.
4. If you come across illegal content or content involving the exploitation of people, leave, do not save or share it, and report it to the competent authorities.
5. Tell the person responsible for the repository and consider downgrading the site to the red level.

8. Validity and Review

Reassess the site **at least every 15 days**. Upgrade to green only if all the green-level criteria are demonstrated; downgrade to red at any sign of a scam, malware or illegal content.

9. Legal Notice

This notice is informative and does not guarantee safety. Using Tor is lawful in most countries, but everyone must know and comply with the law where they are. This document does not list or recommend specific sites.
