Dark Web Report

Version 1.1 · How it was made, risk levels and the classification of 30 sites in 6 categories

Consolidated report · Version 1.1 · British English
6 November 2026

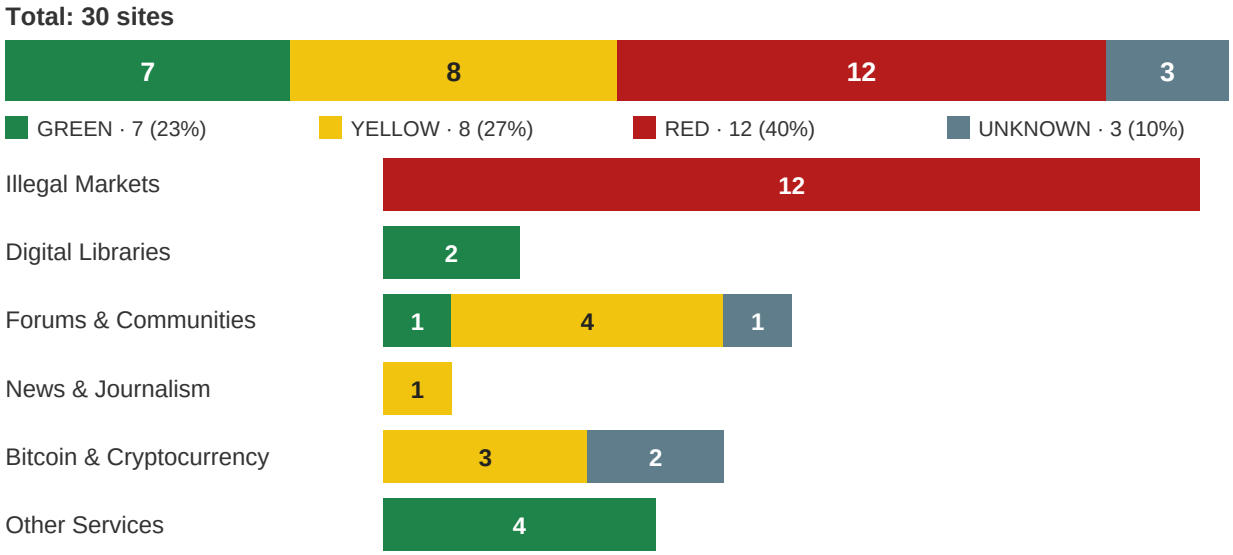
1. Introduction and Important Notice

The dark web is the part of the internet that can only be reached with specific software, such as Tor Browser, with addresses ending in .onion. It is not the same as the deep web, which covers everything not indexed by search engines, such as email and online banking. This report consolidates the exploration of the dark web carried out in the WebAtlas repository: how the work was done, what the risk categories are, and how 30 sites in 6 categories were classified.

Important notice: red-level sites must not be accessed, and none of them was accessed for this work. This report is informative and contains no .onion addresses. No site is entirely free of risk, and the classifications reflect the information available on the date of the report.

2. Summary

30 sites in **6 categories** were classified. The distribution by risk level is as follows:



- **12 red sites (40%)**, all in the Illegal Markets category. Eleven have an individual report, and Bipharma's is pending.
- **7 green sites (23%)**, in four categories.
- **8 yellow sites (27%)**, in forums, news and cryptocurrency.
- **3 sites of unknown risk (10%)**, in forums and cryptocurrency.

Version and reassessment

Version	Date	Change
1.0	2 November 2026	Initial classification of the 30 sites: 11 red, 8 yellow, 7 green and 4 unknown.
1.1	6 November 2026	Reassessment no. 1: **Bipharma moved from unknown to red**. The other 29 sites were kept. Result: 12 red, 8 yellow, 7 green and 3 unknown.

3. How It Was Done

1. **Repository structure**: organisation into network branches, categories and one folder per site, with WebAtlas's numbering and naming convention.
2. **Choice of sites**: selection of the 30 dark web sites, spread over 6 categories, continuing the selection made for the Surface Web.
3. **Access and protection tools**: Tor Browser to reach the Tor network and, as a complement, Mullvad VPN as a network layer.
4. **Risk classification**: each site was given one of four levels (green, yellow, red or unknown), set by the repository's maintainer on the basis of the criteria in the risk notices.
5. **Individual reports**: the 11 red sites each have their own report, prepared **without accessing the sites**, using information obtained by external means. The 12th Illegal Markets site, Bipharma, was reclassified from unknown to red in the version 1.1 reassessment, and its individual report is pending.
6. **Documentation**: risk notices, documentation for the tools and this consolidated report.

Tools and roles

Tool	Role in this work
Tor Browser	Access to the Tor network and .onion addresses
Mullvad VPN	Complementary network layer, for the privacy and security of the connection
ChatGPT	Organisation of the repository: structure, naming and categories
Gemini	Choice of the sites that make up the repository
Claude	Writing the documentation and reports, including this one

Principles adopted

- Sites are cited **by name only**, without a folder identifier.
- **No .onion address** is recorded in this report; for red sites, the address is never recorded.
- The classification was **supplied by the repository's maintainer**. This report records and organises it, without independent reassessment, and the sites were not verified by the author of the report.
- Descriptions are short. Those marked † were **inferred from the site's name and category** and have not been confirmed.

4. Risk Categories and Their Functions

Each site receives one of four levels. More than a grade, the level works as a **rule of conduct**: it determines whether the site may be accessed, with what precautions and how often it should be reassessed.

Level	Meaning	Function in the repository	Review
GREEN	**Low risk.** Indicates that the site is safe for access and exploration	Access permitted with up-to-date Tor Browser, "Safer" security level, no personal login	Every 30 days
YELLOW	**Moderate risk.** Indicates that the site is safe, but not 100%	Extra caution: "Safest" level, no downloads or personal data, isolated environment if possible	Every 15 days
RED	**Extreme risk.** Blocks access to extremely dangerous sites	Do NOT access; address never recorded; individual report	Kept until there is clear evidence to the contrary
UNKNOWN	**Not determined.** Flags a lack of assessment (offline or no concrete information)	"No information, no access"; gather data through the Surface Web	Every 30 days; inactive after 90 days (suggestion)

Note: the unknown level is not intermediate between green and red. It indicates a lack of assessment, because the site is offline or lacks concrete information, and does not mean the site is safe. Each level has its own risk notice in this series of documents.

5. Risk Map

The map shows every site by category, coloured by risk level.

Illegal Markets

DCdutchconnectionUK | DrChronic | TomAndJerry | 420Prime | Dark Web Hackers | AccMarket | DarkMining | USFakeID | Guns and Ammo Store | UKpassports | USAcitizenship | Bipharma

Digital Libraries

Imperial Library | Comic Book Library

Forums & Communities

Shadow Wiki | Cebulka | Breaking Bad | Tenebris | PsychonautWiki | OnionForum

News & Journalism

Dark Net News

Bitcoin & Cryptocurrency

Dark Mixer | EasyCoin | MixaBit | OnionWallet | VirginBitcoin

Other Services

Bible4u | CIA | Onion Share | Cryptostorm

Green: low risk. Yellow: moderate risk. Red: extreme risk, do not access. Grey: unknown risk.

6. Identifiers and Folder Structure

As on the Surface Web, where each site has an identifier in the WEB-NNN pattern, each dark web site receives an identifier in the repository, in the pattern **DARK-NNN-Site-Name**: the DARK prefix, a three-digit number and the site's name with words separated by hyphens.

- **Single, global numbering**, from 001 to 030, not restarting in each category.
- **Order of inclusion**: numbers were assigned in the order in which the sites were listed, category by category.
- **Number 012** corresponds to Bipharma, the 12th Illegal Markets site, reclassified from unknown to red in the version 1.1 reassessment.
- **In texts and reports**, each site is cited by name only. The identifier serves to organise the folders, and this section is the place where it is listed.

Category folders and identifier ranges

Category folder	Identifiers	Sites
Illegal-Markets	DARK-001 to DARK-012	12
Digital-Libraries	DARK-013 to DARK-014	2
Forums-Communities	DARK-015 to DARK-020	6
News-Journalism	DARK-021	1
Bitcoin-Cryptocurrency	DARK-022 to DARK-026	5
Other-Services	DARK-027 to DARK-030	4
Total	DARK-001 to DARK-030	**30**

Identifiers of all the sites

Folder identifier	Level	Folder identifier	Level
DARK-001-DCdutchconnectionUK	RED	DARK-016-Cebulka	YELLOW
DARK-002-DrChronic	RED	DARK-017-Breaking-Bad	YELLOW
DARK-003-TomAndJerry	RED	DARK-018-Tenebris	YELLOW
DARK-004-420Prime	RED	DARK-019-PsychonautWiki	GREEN
DARK-005-Dark-Web-Hackers	RED	DARK-020-OnionForum	UNKNOWN
DARK-006-AccMarket	RED	DARK-021-Dark-Net-News	YELLOW
DARK-007-DarkMining	RED	DARK-022-Dark-Mixer	YELLOW
DARK-008-USFakeID	RED	DARK-023-EasyCoin	YELLOW
DARK-009-Guns-and-Ammo-Store	RED	DARK-024-MixaBit	YELLOW
DARK-010-UKpassports	RED	DARK-025-OnionWallet	UNKNOWN
DARK-011-USAcitizenship	RED	DARK-026-VirginBitcoin	UNKNOWN
DARK-012-Bipharma	RED	DARK-027-Bible4u	GREEN
DARK-013-Imperial-Library	GREEN	DARK-028-CIA	GREEN
DARK-014-Comic-Book-Library	GREEN	DARK-029-Onion-Share	GREEN
DARK-015-Shadow-Wiki	YELLOW	DARK-030-Cryptostorm	GREEN

7. Site Categories

† Description inferred from the site's name and category; not confirmed.

7.1 Illegal Markets · 12 sites

Function: platforms for buying and selling illegal products and services, such as drugs, weapons, forged documents, stolen accounts and criminal services.

Site	Level	Description	Action
DCdutchconnectionUK	**RED**	Drug trafficking between the UK and the Netherlands	DO NOT ACCESS · individual report
DrChronic	**RED**	Sale of marijuana	DO NOT ACCESS · individual report
TomAndJerry	**RED**	Sale of cocaine	DO NOT ACCESS · individual report
420Prime	**RED**	Sale of cannabis	DO NOT ACCESS · individual report
Dark Web Hackers	**RED**	Hiring criminal hackers	DO NOT ACCESS · individual report
AccMarket	**RED**	Sale of premium PayPal, eBay and bank accounts	DO NOT ACCESS · individual report
DarkMining	**RED**	Bitcoin mining with stolen electricity	DO NOT ACCESS · individual report
USFakeID	**RED**	Shop selling fake US identity documents	DO NOT ACCESS · individual report
Guns and Ammo Store	**RED**	Sale of weapons	DO NOT ACCESS · individual report
UKpassports	**RED**	Fake British passports	DO NOT ACCESS · individual report
USAcitizenship	**RED**	Offer of American citizenship	DO NOT ACCESS · individual report
Bipharma	**RED**	Possible trade in pharmaceutical products †	DO NOT ACCESS · individual report

- All 12 sites are **red**. The extreme risk stems from the illegal nature of what they offer, the scams and traps common in this environment and criminal liability.
- **None was accessed.** Eleven have an individual report, with the description, an illustrative image, the reasons for the red level and prevention guidance. Bipharma's, reclassified as red, is pending.
- No tool, including Tor Browser and a VPN, makes access safe or lawful.

7.2 Digital Libraries · 2 sites

Function: digital collections of books and comics, available to read and download.

Site	Level	Description	Action
Imperial Library	GREEN	Digital library of books †	Access permitted, with good practice
Comic Book Library	GREEN	Digital library of comics †	Access permitted, with good practice

- Both sites are **green**: considered safe for access and exploration from a technical standpoint.
- Note: works may be protected by copyright, and downloading them may be unlawful under local law. Know the local legislation.
- If you download a file, check its source and open it outside Tor, with up-to-date antivirus.

7.3 Forums & Communities · 6 sites

Function: spaces for discussion and collective knowledge, with content created by the users themselves.

Site	Level	Description	Action
Shadow Wiki	YELLOW	Wiki and community †	Extra caution, no downloads
Cebulka	YELLOW	Largest Polish community on the Tor network	Extra caution, no downloads
Breaking Bad	YELLOW	Largest chemistry community	Extra caution, no downloads
Tenebris	YELLOW	The "Reddit of the dark web"	Extra caution, no downloads
PsychonautWiki	GREEN	A wiki on the Tor network	Access permitted, with good practice
OnionForum	UNKNOWN	Forum †	No information, no access

- **4 yellow** (Shadow Wiki, Cebulka, Breaking Bad and Tenebris): user-generated content and variable moderation prevent a green rating.
- **PsychonautWiki is green**, and **OnionForum has unknown risk**: the reason (offline or no concrete information) was not given, and the rule "no information, no access" applies.
- Chemistry communities, such as Breaking Bad, may discuss controlled substances: do not follow or share instructions for illegal activity.
- Do not provide personal data and do not click unfamiliar links.

7.4 News & Journalism · 1 site

Function: information and coverage of subjects relating to the dark web.

Site	Level	Description	Action
Dark Net News	YELLOW	News about the dark web	Extra caution, no downloads

- Dark Net News is **yellow**: dark web news may carry links to higher-risk sites, and the content should be checked against other sources.

7.5 Bitcoin & Cryptocurrency · 5 sites

Function: financial services using cryptocurrency, such as wallets, exchange and mixing services (mixers).

Site	Level	Description	Action
Dark Mixer	YELLOW	Bitcoin mixing service †	Extra caution, no downloads
EasyCoin	YELLOW	Bitcoin service †	Extra caution, no downloads
MixaBit	YELLOW	Bitcoin mixing service †	Extra caution, no downloads
OnionWallet	UNKNOWN	Cryptocurrency wallet †	No information, no access
VirginBitcoin	UNKNOWN	Bitcoin service †	No information, no access

- **3 yellow** (Dark Mixer, EasyCoin and MixaBit) and **2 unknown** (OnionWallet and VirginBitcoin). For the unknown ones, the rule "no information, no access" applies.
- This is the category where the risk is most **financial**: services that receive funds may be scams, and cryptocurrency transactions are irreversible.
- Mixing services may be regulated or banned in some jurisdictions and may raise suspicion of money laundering. Even at yellow, they call for legal attention.
- Do not send amounts you cannot afford to lose and do not entrust funds to services without reliable identification.

7.6 Other Services · 4 sites

Function: assorted services of a religious, institutional, privacy and file-sharing nature.

Site	Level	Description	Action
Bible4u	GREEN	Biblical site	Access permitted, with good practice
CIA	GREEN	Official CIA site on the Tor network	Access permitted, with good practice
Onion Share	GREEN	File sharing over the Tor network †	Access permitted, with good practice
Cryptostorm	GREEN	Privacy (VPN) service †	Access permitted, with good practice

- All four sites (Bible4u, CIA, Onion Share and Cryptostorm) are **green**.
- Always confirm the .onion address with an official source, especially for the site of an institution such as the CIA, which is a common target for imitations.

- Onion Share and Cryptostorm are privacy tools: find out about their proper use and about local law.

8. Overall Analysis

Category	Green	Yellow	Red	Unknown	Total
Illegal Markets	0	0	12	0	**12**
Digital Libraries	2	0	0	0	**2**
Forums & Communities	1	4	0	1	**6**
News & Journalism	0	1	0	0	**1**
Bitcoin & Cryptocurrency	0	3	0	2	**5**
Other Services	4	0	0	0	**4**
Total	**7**	**8**	**12**	**3**	**30**

- Extreme risk is concentrated in **a single category**: all 12 red sites belong to Illegal Markets.
- Categories with **user-generated content** (forums and news) are mostly yellow.
- **Institutional, religious and privacy** services are green.
- The **cryptocurrency** category brings together yellow and unknown sites and carries the greatest financial risk among the non-illicit categories.
- The **3 unknown sites** (10%) need more information before they can be reclassified.

Recommendations

- Reassess green and unknown sites every 30 days and yellow sites every 15 days, as suggested in the risk notices.
- Gather information on OnionForum, OnionWallet and VirginBitcoin through the Surface Web, without accessing them, in order to reclassify them.
- Prepare Bipharma's individual report, now classified as red, and record the evidence behind the reclassification.
- Keep red sites unaccessed and with no address recorded.
- Complete the descriptions marked † using reliable sources.
- If a dark web branch is created in the repository, follow the same category structure and naming convention.

9. Limitations

- The classification applies to the date of the report and may change: sites go down, change hands and change behaviour.
- The information was supplied by the repository's maintainer and has not been independently verified.
- Short descriptions, especially those marked †, are no substitute for a detailed assessment.
- This document does not list addresses, does not recommend accessing any site and is no substitute for legal advice.

10. Related Documents

- Documentation for Tor Browser and Mullvad VPN.
- Documentation for ChatGPT, Gemini and Claude.
- Risk notices: green, yellow, red and unknown.
- Individual reports for the red sites (Bipharma's is pending).
- Documentation of the dark web level reassessments.
- Surface Web Map.

Using Tor is lawful in most countries, but everyone must know and comply with the law where they are. Illegal activity remains illegal on the Tor network.
