Risk Notice
Green Level

Site considered safe for access and exploration

Risk notice · British English
November 2026

RISK LEVEL

GREEN

Site assessed as low risk: safe for access and exploration, provided the good practice in this notice is followed.

▼

GREEN · Low	YELLOW · Moderate	RED · Extreme

1. Notice Details

Fill in the fields when issuing the notice for an assessed site.

Field	Entry
Notice code	_____
Site name	_____
Category	_____
.onion address	_____
Date of assessment	____ / ____ / _____
Assessed by	_____
Next review	____ / ____ / _____
Level assigned	GREEN · Low risk

2. Meaning of the Green Level

The green level indicates that, on the date of assessment, the site was considered **safe for access and exploration**: no signs were found of scams, malware distribution, illegal content or improper data collection.

- It can be accessed and explored normally with Tor Browser, with the basic precautions set out in this series of documents.
- It does not require extraordinary measures, such as an isolated environment.
- **Safe does not mean zero risk.** No site, on the dark web or off it, is entirely free of risk, and the level reflects only the assessment made on the date shown.

3. Criteria for the Green Level

To receive a green classification, the site must meet **all** of the criteria below:

- **Identifiable operator**: a known organisation, outlet, project or service, with a presence that can be confirmed on the Surface Web.
- **Confirmed address**: the .onion address is published by an official source, such as the organisation's own Surface Web site.
- **Lawful content**, consistent with the site's stated purpose.
- **No excessive demands**: it does not require unnecessary personal data, payments or the installation of programs.
- **No recent, reliable reports** of scams, malware, impersonation or compromise.
- **Stable operation** and predictable behaviour on verification visits.

4. Residual Risks

Even at the green level, risks remain that the user should be aware of:

- **Fake address (typosquatting)**: .onion addresses that resemble the real one, created to deceive.
- **Compromised site**: a legitimate site may be hacked or change hands.
- **User error**: logging in with a personal account, sharing data or altering browser settings can identify you.
- **Downloads**: downloaded files, even from trusted sites, may contain problems.
- **External links**: the site may point to pages of higher risk.
- **Disinformation**: content posted by third parties may be false.

5. How to Protect Yourself

Risk	Prevention
Fake address	Confirm the address with the official source and bookmark it only after checking every character.
Compromised site	Watch for unexpected changes (layout, new requests, automatic downloads) and leave at any sign of abnormality.
Identification through error	Do not log in with personal accounts, do not reuse usernames and passwords, and do not change Tor Browser's settings.
Downloaded files	Avoid downloads; if necessary, check the source and open files only outside Tor, with up-to-date antivirus.
External links	Do not click links to sites that do not have a green risk notice.
Disinformation	Cross-check important information against reliable Surface Web sources.

6. Recommended Access Procedure

1 Update Tor Browser from the Tor Project's official website.

2. Confirm the .onion address with the official source and type or paste it, checking every character.
3. Keep the security level at **Safer** (or higher) whenever the site works well that way.
4. Browse without logging in to personal accounts.
5. Avoid downloading files and do not open downloaded documents while connected to Tor.
6. When finished, use **New Identity** and close the browser.
7. Optional: use Mullvad VPN as a complementary layer, as described in the documentation in this series.

7. If Something Goes Wrong

Warning signs: an unexpected redirect, a request for data or payment, an automatic download, a sudden change of appearance or alarmist messages.

1. Close the tab or window immediately and use **New Identity**.
2. Do not download or open any file; if you already have, do not run it and scan it with antivirus.
3. If you entered a password or personal data, change your passwords from a secure device.
4. Tell the person responsible for the repository and reassess the site's level.

8. Validity and Review

The green level applies only on the date of assessment. Reassess the site **at least every 30 days**, and immediately if there is a change of address, operator or content, or any suspicious sign. If in doubt, downgrade the site to the yellow level.

9. Legal Notice

This notice is informative and does not guarantee absolute safety. Using Tor is lawful in most countries, but everyone must know and comply with the law where they are. This document does not list or recommend specific sites.
