Risk Notice
Red Level

Extremely dangerous site: do not access

Risk notice · British English
November 2026

RISK LEVEL

RED

EXTREMELY DANGEROUS. Site assessed as extreme risk: DO NOT ACCESS and do not explore.

GREEN · Low	YELLOW · Moderate	▼ RED · Extreme

1. Notice Details

Fill in the fields when issuing the notice for an assessed site.

Field	Entry
Notice code	_____
Site name	_____
Category	_____
.onion address	DO NOT RECORD (red level)
Date of assessment	____ / ____ / _____
Assessed by	_____
Next review	____ / ____ / _____
Level assigned	RED · Extreme risk

2. Meaning of the Red Level

The red level indicates that the site is **extremely dangerous**. The recommendation is **not to access it**: not out of curiosity, not for research, and not with protective tools.

- No tool, including Tor Browser and a VPN, makes this access safe.
- The risk involves the user's device, data, money, psychological wellbeing and legal position.
- If in doubt between yellow and red, choose red.

3. Indicators of the Red Level

A single one of the indicators below is enough for the classification:

- **Illegal trade** in prohibited goods or services.
- **Scams and fraud**: fake shops, fake "recovery" services, fake wallets and requests for advance payment.

- **Malware distribution** or behaviour that attacks the browser.
- **Criminal services**, such as the sale of stolen data, forged documents or hacking to order.
- **Content involving extreme violence or the exploitation of people**, especially children and young people, which is a serious crime.
- **Clones of legitimate sites** created to steal accounts and data.
- **Address of unknown origin** circulated in messages or anonymous lists.
- **Suspected trap** (honeypot) for surveillance or extortion.

4. Risks

- **Malware and ransomware** that damage or hold the device to ransom.
- **Data theft and financial fraud**.
- **Extortion and blackmail**, including threats to disclose information.
- **Loss of anonymity** and exposure to surveillance.
- **Criminal liability**: in many countries, accessing, downloading, buying or sharing certain content or products is a crime.
- **Psychological impact** of violent or disturbing content.
- **Risks to others**: contacts and family members may become targets of scams or threats.

5. How to Protect Yourself

The main protection is **not to access it**. In addition:

Risk	Prevention
Malware and ransomware	Do not access; keep your system and antivirus up to date and make regular backups.
Data theft and fraud	Never provide personal data, passwords or payments; turn on two-step verification on your accounts.
Extortion and blackmail	Do not reply, do not pay, and keep the messages as evidence for the authorities.
Loss of anonymity	Do not access; red sites may be traps.
Criminal liability	Do not access, download, buy or share anything unlawful; know the local law.
Psychological impact	Do not look for disturbing content; if you see something of the kind, step away and seek support.
Scams by message	Do not open invitations or links from strangers and do not pass them on.

6. Procedure

1. **Do not access.** Do not search for or look up the address.
2. Do not click links received in messages, forums or on social networks.

3. In the repository, record **only the risk level**. Never record, publish or share the address of a red site.
4. Let other users know that the site must not be accessed.

7. If You Accessed It by Mistake

1. Close the tab or window **immediately** and quit Tor Browser. Do not interact with anything on the page.
2. Do not download or open files. If something was downloaded, do not run it, disconnect the device from the network and run a full antivirus scan.
3. If you gave a password or personal data, change your passwords from a clean device and turn on two-step verification.
4. If you made a payment, contact your bank or the platform used straight away and log the incident.
5. If you are threatened or blackmailed, do not reply or pay; keep the evidence and contact the police.
6. If you come across content involving the exploitation of children or young people, **do not save, copy or share it**; leave the page and report it. In the UK, use the Internet Watch Foundation and your local police; in Brazil, Disque 100 and SaferNet Brasil.
7. If what you saw causes distress, talk to someone you trust or seek professional support.

8. Validity and Review

The red level is kept until there is clear, verifiable evidence to the contrary. Any proposal to downgrade it must be reviewed carefully, without anyone needing to access the site.

9. Legal Notice

This notice is informative. Illegal activity remains illegal on the Tor network, and the authorities have investigative methods that do not depend on breaking the network's anonymity. This document does not list or recommend specific sites and does not guide access to dangerous or illegal content.
